## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see pages 9 and 10, filed 8/24/05, with respect to claims 1, 3-9, 11-16, and 24 have been fully considered and are persuasive. The rejections of claims 1, 3-9, 11-16, and 24 has been withdrawn.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 17 recites the limitation "the audio level of the audio source" in line 9. There is insufficient antecedent basis for this limitation in the claim. The term "audio source" in line 9 is inconsistent with "audio level" in line 1.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 17 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Davidson (US Patent 5,778,077).

Regarding Claim 17, Davidson discloses a method for adjusting an audio level of an audio device, comprising: receiving a first audio signal (Fig. 3, volume up or down signal); transmitting the received first audio signal to the audio device (Fig. 3); multiplying, at the audio device, a second audio signal by a volume setting value to produce an adjusted second audio signal (It is inherent that an input audio signal to TV 210 will be multiplied by a volume setting in order to produce a desired output volume level); determining, at the audio device, a difference between the first audio signal and the adjusted second audio signal (Fig. 6, steps 136 and 140); comparing the difference to a threshold value (Fig. 6, steps 136 and 140); and adjusting the audio level of the audio source when the difference exceeds the threshold value (steps 138, and 142).

Regarding Claim 18, Davidson further discloses determining if the audio level is to be increase or decreased (steps 138, and 142).

#### ***Allowable Subject Matter***

5. Claims 1-16, 19-20, and 24 are allowed.
